

Energija doma, Energetika.NET d.o.o.

Publication of the first children's picture book about natural gas *Birth of Plinko and his mission*

Energija doma, the first online community for the promotion of sustainable living, presents Plinko, an adorable picture book character who illustrates everything there is to know about natural gas, from how it forms to all the ways this energy product is used. The publication of the picture book was supported by Geoplin d. o. o. Ljubljana, družba za trgovanje in transport zemeljskega plina.

In our efforts in recent decades to rapidly improve the comfort of our lives, we have forgotten that the quality of life is not only about more comfortable living and having more goods; the long-term sustainability of our lifestyle is also important.

Our development was driven by the excessive use of fossil fuels, resulting in the release of excessive quantities of carbon dioxide into the environment. Maintaining such a situation would lead to a severe deterioration in living conditions for us and even more so for future generations. We must therefore change our way of life as soon as possible by using only environmentally friendly forms of energy. The ultimate and ideal objective is the full transition to the use of renewable and environmentally friendly sources, but it will take decades, possibly a century, to achieve that objective.

In the time it takes to abandon the use of fossil fuels, we must make full use of those sources that do the least harm to the environment. Natural gas is a fuel that when burned releases significantly less harmful substances into the atmosphere than coal and oil.

The Plinko picture book can present the transition to natural gas to our homes and factories in a simplified manner to which young children can relate, while explaining the environmentally friendly and widespread use of this energy source.

Therefore, Geoplin expert *Janez Možina* wrote the foreword to the picture book about Plinko, whose story will warm the hearts of children in kindergartens which, in cooperation with the Kindergarten Association of Slovenia and in the scope of the Plinko art contest, will receive their own copies of the picture book, based on which children will create their own *Plinko* until the middle of December. The President of the Kindergarten Association of Slovenia *Božena Bratuž* also prepared a foreword to the picture book.

The story about Plinko was written by the author and editor of Energetika.NET and eco-books, *Alenka Žumbar Klopčič*. Plinko was illustrated by *Nina Meglič*.

If you want to become a part of this culturally aware and socially responsible group, which cares for the environment and the future of the planet, call: +386 1 40 12 868 or write to us at urednistvo@energetika.net and receive your copy of the picture book. We also prepare package offers for companies!
